Sample - heart template

Perler | 15 x 15 beads | 109 beads | 1 colors

Approx. 7.5 x 7.5 cm before fusing. 1 x 1 square 29-peg boards.

Pattern overview - empty cells mean no bead.

Board assembly map - work left to right, top to bottom.

B1

Materials and symbol key

Symbols match the board pages. Counts are exact for this grid; allow a few spare beads when purchasing.

	I	80-19041	Pink - 109 beads

Also prepare: compatible square pegboards, tweezers, bead ironing paper, a household iron and a flat heat-safe work surface.

Screen colors are approximate. Check the supplied color names and codes against your supplier before ordering. Use one compatible bead size and brand; Mini assumes 2.6 mm and other palettes assume 5 mm.

Make your pattern: step by step

1. Print and prepare

Print the numbered board pages in color on A4 or fit to your paper. These are reference charts, not life-size templates: do not place a pegboard directly over the printout. Sort beads using the materials list.

2. Arrange the boards

Use the assembly map to arrange 1 compatible 29 x 29 square pegboards. Board pages list their row and column. Adjacent pages continue the same design; do not repeat the border row.

3. Place beads by coordinate

Start at the top left of each board. Match the column letters, row numbers and cell symbols to the materials key. Leave unfilled cells empty. Count rows regularly and compare the completed layout with the overview.

4. Check before heating

Look for missing beads and isolated cells. A bead only connected diagonally may not fuse to its neighbor; add connecting beads in the editor before exporting if the design needs them.

5. Fuse with adult supervision

An adult should handle the hot iron. Follow the bead manufacturer instructions for your exact bead type, ironing paper, heat and cooling method. Test on spare beads first. Keep the iron off bare beads and the pegboard.

6. Cool and finish

Let the piece cool following manufacturer guidance before lifting or adding a keyring, backing or frame. Review how multi-board sections connect before moving them.
